About Phenology Wheels

What is Phenology?

Phenology means the study of the seasons and life cycles in the natural world.

What is a Phenology Wheel?

A phenology wheel is a circular diagram, divided into segments, that each represent a defined time-period. Over time, seasonal nature data and/or visual information is added to each segment, which creates a broader picture of seasonal trends or cycles in nature.

What time-periods do Phenology Wheels cover?

Annual wheels: these may get subdivided into 12 calendar months, 13 lunar months or 8 celtic sabbats in a year.

Monthly wheels: these usually get divided into daily segments. In the modern Gregorian calendar that may be 28, 29, 30 or 31 days.

What data do Phenology Wheels capture?

In a nutshell - whatever you like! These templates include a few circular rows for you to add data and blank space for an optional picture, but you can add more rows with a compass if you prefer.

Annual wheels: at the end of each month, spend some time drawing or painting something from nature that you enjoyed.

Monthly wheels: these are ideal for recording key weather and seasonal data e.g. temperature, rainfall, sunrise/set or moon phase.

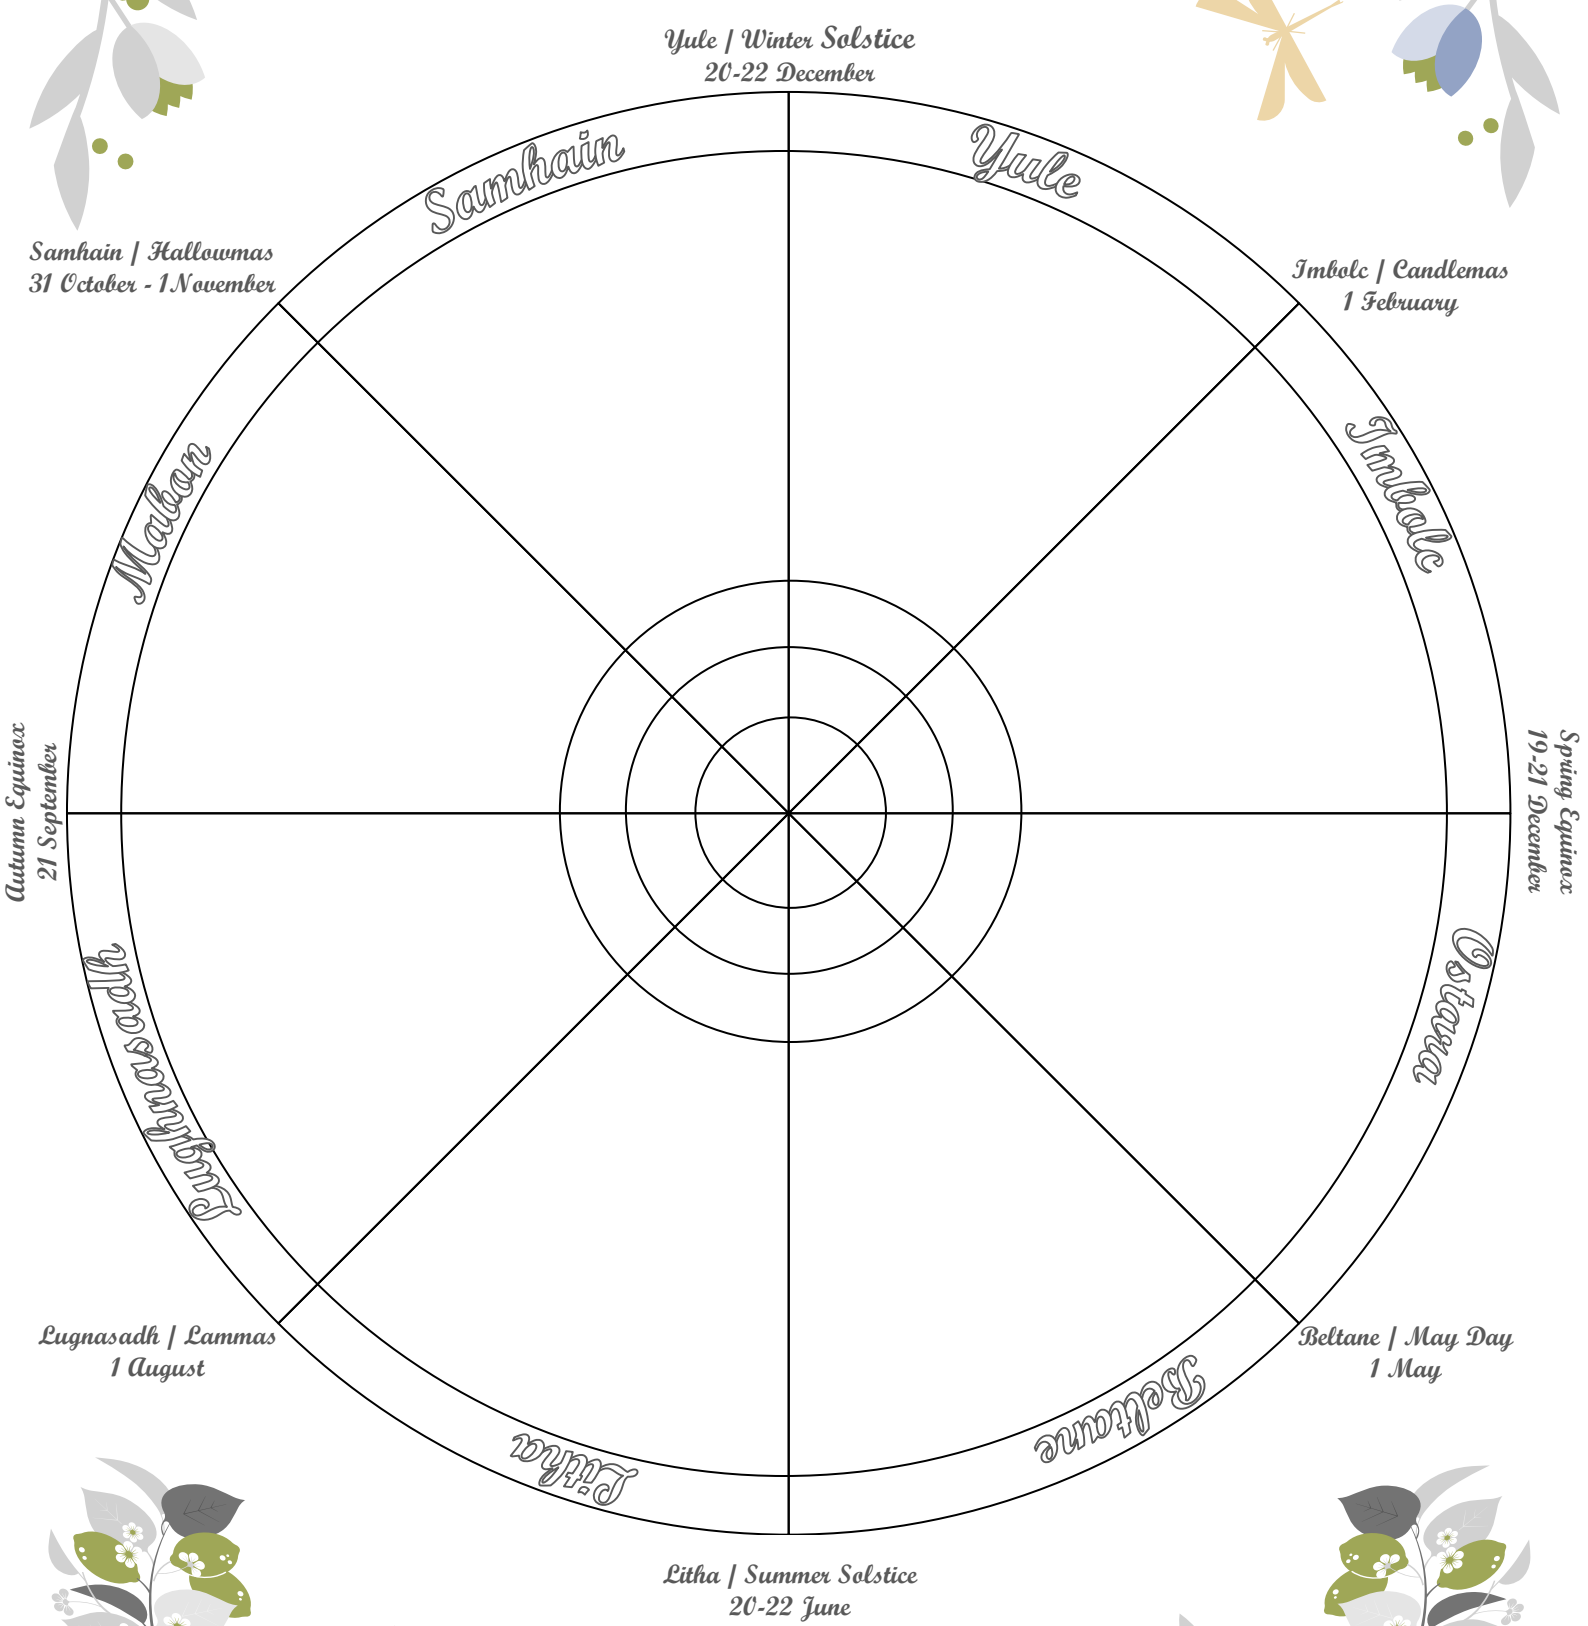

How do I use these templates?

1. Print out the template you need either onto card to make a reusable template, or directly on the paper you plan to use. You can cut it out to add into a journal or use it directly.
2. Fill it in! If using paints, you may want to use water-fast ink and special watercolour paper for best results.
